

ABOUT ME

Hi, I'm Ricardo Jorge, but you can call me RJ. I'm an AI Product Engineer who started coding young, purely for fun: modding and reverse-engineering games and consoles, building my own fighting game on the MUGEN engine, and running dedicated servers for Counter-Strike, Minecraft, and half the titles I grew up on. At 14, programming LEGO Mindstorms robots in science class took our team to a second-place national finish and the final four of the 2008 robotics world cup in China.

Competitive gaming taught me the rest. I led teams, guilds, and clans to the top of online ladders and to LAN tournament wins, which turned out to be management training in disguise: recruiting, coaching, and keeping a roster of hyperactive remote teenagers aligned on one strategy.

I went professional in 2015 and quickly specialized in frontend TypeScript applications, building on React since 2016 and Next.js since 2018. It was an early bet on the stack that became the standard for both the web and AI products.

On most projects I was the first frontend hire, which meant owning the architecture, tooling, component library, infrastructure, and pipelines from day one. It also meant growing the team: hiring, onboarding, and writing the playbooks that let new engineers integrate seamlessly.

I've worked with companies across many industries but most of my experience is building dashboards, product platforms, and proprietary data explorers for cybersecurity, crypto, and gaming companies. That's where I found a passion for data-driven products and visualisations, and where I learned what separates a polished product from a prototype.

I operate as a self-guided missile: point me at a target and I'll figure out how to hit it on my own, using everything I've learned to avoid the pitfalls and drive straight to the solution. In practice, that has meant wearing every hat a startup has (officially and unofficially), though I default to product engineering, where I have the biggest and most immediate impact.

I've built with AI since the first releases of Copilot, ChatGPT, and MidJourney, moving from autocomplete to prompt and context engineering to designing full agent harnesses. Today I run an automated fleet of AI agents that maintain my personal projects.

For the past few years I've been working as a hands-on B2B freelancer across multiple teams, putting my technical skills to full use, sharing what I know, and learning from the best in their fields.

I'm always open to exploring exceptional opportunities. Reach out if you're keen on working together.

Have a nice day!

SKILLS	Core Stack	TypeScript · React.js · Next.js · AI SDK · Convex · Playwright · Vercel
	AI Engineering	Agent Automations · Custom Agent Skills · Harness Engineering · Codex · Claude Code · n8n
	UI & Design	Tailwind CSS · shadcn/ui · Material-UI · Design Systems · Storybook · Refactoring UI
	Data & Visualisation	Dashboards · Data Visualisation (d3 · Recharts · Nivo) · Web Scraping · Data Enrichment
	Leadership & Delivery	Team & Project Management · End-to-End Product Engineering · Product Design · Agile Methodologies
	Foundations	JavaScript · Node.js · HTML5 · CSS · Git · GitHub Actions · REST APIs · CI/CD · Testing

EXPERIENCE

AI Product Engineer

Mar 2025 - Present

rj11io · rj11.io · B2B · Remote

Hands-on AI product engineering for multiple early-stage startups, building projects from the ground up:

- AI Data Extraction from PDFs
- AI SEO Analytics
- GenAI Dermatopathology Portal
- Real Estate Platform
- Multiple Cybersecurity Dashboards
- Multiple Proprietary Data Explorers
- Multiple AI Chats / GPT Experiences
- AI Smart Scrapping Agents and n8n Workflows
- AI Agent Harnesses, Skills, and Automations

Product / Datavis Engineer

Apr 2024 - Mar 2025

Hunt Intelligence, Inc. · hunt.io · B2B · Remote

Left OMEGA to go deep on my specialty, data visualisation for a threat-intelligence product:

- Built a modern TypeScript codebase with the latest Next.js and shadcn/ui, production and staging environments on Vercel, end-to-end tests with Playwright, CI/CD on GitHub Actions, and automated release changelogs hooked up to Slack
- Built custom data visualisation components like the IP History Widget
- Built core product modules like AttackCapture™ and HuntSQL™
- Built a new API documentation platform on top of OpenAPI: enriched the raw `openapi.json` with metadata and shipped a UI friendlier and more intuitive than Swagger

Senior Frontend Engineer → Team Lead

Jun 2023 - Apr 2024

OMEGA Systems · omegasys.eu · Remote

Joined to build the next generation of OMEGA's iGaming platform management system (CORE5) with TypeScript and React. Promoted to lead the frontend team.

- Data visualisation for the Main and Social dashboards, plus report and configuration views (Cashback, Refer-a-Friend, Pending Withdrawals, Challenges / Leaderboards)
- Built the localisation / internationalisation module and an internal "Tab System" UI
- As lead: built the "New Developer" onboarding experience, set standards for tickets, documentation, and remote / async workflows, with strong emphasis on the "Definition of Done"
- Gave weekly "TED" talks to bring the whole team up to speed on technology and product
- Kept shipping: product-engineered new features from scratch, end to end

Senior Frontend Engineer

Jan 2022 - May 2023

Phantasma Chain · phantasma.info · Remote

- Built a frontend monorepo for all the new tools and apps
- Designed and developed the Phantasma UI Storybook
- Built Phantasma Explorer
- Tests with Playwright, CI with GitHub Actions, CD with Vercel
- Contributed improvements to the Phantasma TypeScript SDK
- Built in-house tools: a custom React hook for the Phantasma SDK, localisation, white-label theming, environment configs, and a custom API / scripts / hooks module

Frontend Lead

Feb 2020 - Oct 2021

BinaryEdge · Coalition, Inc. · coalitioninc.com · Remote

Frontend Engineer and Tech Lead for BinaryEdge and Coalition's Customer Security team. Started as a solo frontend engineer and grew a team focused on customer-facing security apps and internal tools. Introduced React, TypeScript, Material-UI, Nivo, and Next.js to the frontend stack, plus the concept of micro frontends.

- Attack Surface Monitoring (ASM) on the BinaryEdge Portal as a micro frontend, later integrated into Coalition Explorer and Coalition Control
- Tech Lead for Coalition Explorer and the more ambitious Coalition Explorer 2.0, housing critical internal tools for the whole company
- Claims management, report generation, security review, and Executive Risks platforms inside Coalition Explorer
- Tech Lead for the Coalition Storybook, the Customer Security Web UI component library, and data visualisations
- Tech Lead for the RSA and Security Week marketing pages
- Migrated the frontend CI/CD from Drone to GitHub Actions, improving pipelines, environments, and developer experience

Fullstack Engineer, Co-Founder

Mar 2018 - Dec 2019

Glaiveware · Lisbon, Portugal · Remote

A great learning experience that taught me how to manage projects and run a business creating bespoke web apps above market standards.

- JavaScript and TypeScript: React, Redux, Redux-Saga, Next.js, Node.js, Express
- Material-UI, HTML5 + CSS3 (Bootstrap 4, SASS)
- Databases: MongoDB, Firebase, MySQL, SQLite
- Infrastructure: AWS (EC2, S3, SES, API Gateway, Lambda), Ubuntu, nginx
- Beyond code: SEO & SEM, branding & design, marketing & advertising, copywriting & content management

React Native Developer

Jan 2017 - Dec 2017

Sycret.ink · Neuchâtel, Switzerland · Remote

Mobile chat app with end-to-end encryption in a serverless environment, developed under contract with a team of three. Learned a lot about encryption protocols and mobile app deployment.

- React Native, libsignal-protocol, Android Studio
- AWS (API Gateway, Lambda), SQLite

Full Stack JavaScript Developer

Sep 2016 - Nov 2016

American Heart Association · Remote

Built an admin dashboard for the AHA's Kinect integration: interfaced users with the collected data, connected doctors and their patients, printed reports, and let superusers manage the whole system. Acquired through a university scholarship with free choice of technology, so I built my first web app as a full-stack JavaScript developer, using React and Node.

Frontend Developer

Oct 2015 - Jul 2016

NextBitt · Lisbon, Portugal

Created analytics dashboards and reporting, auditing, and management tools for NextBitt's asset & facilities management software.

- JavaScript (jQuery, Angular.js), .NET (C#, MVC), HTML5 + CSS3
- Heavy date/time logic (Moment.js, date pickers) and data visualisation (Google Charts, dygraphs, Chart.js, d3.js, C3.js, and more)

Java Developer

Jan 2015 - Mar 2015

Science4you · Lisbon, Portugal

Internship. Built a management system for the online store using Java and MySQL. What started as a simple display-and-print tool for the back office evolved into a full application managing orders, printing detailed reports, and sending automated emails to customers. Which all were previously done by hand.

EDUCATION

IT Systems Management and Programming

2013 - 2016

Escola Profissional de Tecnologia Digital · Lisbon, Portugal

Técnico de Gestão e Programação de Sistemas Informáticos
